Phishing attack

You perform a phishing attack to another player. You steal a random card from the other player's hand.

SQL Injection

You perform a SQL Injection attack to another player. You destroy all their database cards.

Log4Shell

A massive vulnerability appears in Java affecting all the players. All Java cards in play are destroyed.

## Ransomware

There's a new ransomware gang around. Another player may destroy a cluster they control. If he doesn't, he skips his next turn.

Stolen Credentials

You manage to steal another player's cloud credentials. You steal a tech card from another player's hand.

Supply Chain Attack

You perform a supply chain attack to another player. You destroy all their open source cards.

Brute Force Attack

You focus all your computing power on the target. Destroy one tech of your choice from another player.
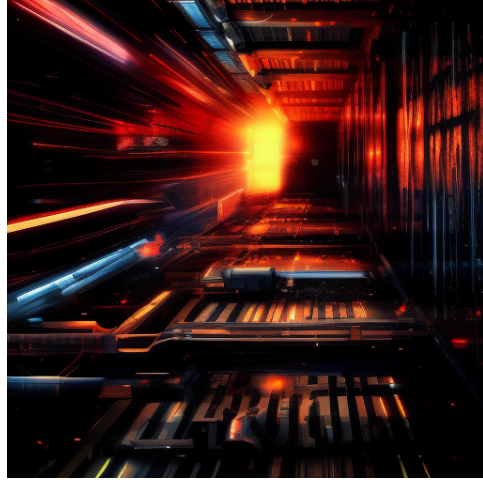

Cloud Obfuscation

Your security team has implemented measures to prevent fingerprinting of your clusters. All the cluster cards are again hidden and you can shuffle them.
